

WORKSHOP 14

DATE: 20/09/2023

TIME: 11.00 AM

New Frontiers: Neuro-Acupuncture. History, research and clinical applications of an effective system combining traditional Acupuncture and Neurosciences

105 minutes

Acupuncture is becoming worldwide used in neurological diseases along with the growth of research and evidence in literature. Since the 1970s many techniques have been defined, combining Acupuncture and Neuroscience, the so called Neuro-Acupuncture (mainly Scalp Acupunctures and Neuro-Auriculotherapy). Due to an easier learning, standardization, low cost and high efficacy, Neuro-Acupuncture represents a major tool for the integration of Acupuncture in different western medical settings. In this Workshop participants will discover history, main teachers, different methods and their evolution, clinical indications and some common protocols for neurological disorders, in order to improve the efficacy of treatments in a neurofunctional sense.

1. Foreword and Historical Introduction
2. Mechanisms of action and research evidence
3. Experiences from the world and short videos
4. Introduction to Neuro-auriculotherapy and Craniopuncture: the Schools, the Masters, the most commonly used treatments
5. Hand-on demonstration

Speakers

Dott.ssa Cecilia Lucenti

Prof.ssa Giovanna Franconi
