WORKSHOP 2

INTEGRATIVE ONCOLOGY TREATMENT (TOI) FOR GBL UNDER ARTOI METHOD

90 minutes

Glioblastoma is the most common and aggressive type of brain tumors with very poor prognosis and high recurrence rates. Surgical resection and associated radiotherapy followed by adjuvant chemotherapeutic drugs represent the gold standard but, the recurrence is frequent and not free on side effects. The beneficial effects of polyphenol as Curcumin or PD/RSV as antioxidant, anti-inflammatory, antitumor activity is evident. Boswellia serrata (BS) extract has been added to the therapy to reduce the edema occurring in GBL. We will be discussing the news research about the treatment for to fight GBL under the combine use of conventional medicine and natural substances, and the clinical results with the ARTOI integrative methods.

- GP Ravagnan: The study of neuroinflammation (15 minutes)
- AM Stringaro: The results in vitro of combination from Curcumin and Polydatin in GBL cells (20 minutes)
- AM Stringaro: The electronic microscopy results of Curcumin and polydatin combination in GBL cells (20 minutes)
- M. Bonucci: The Integrative Method for treatment of GBL patients (20 minutes)
- Q&A (15 minutes)

Speakers

- **GP Ravagnan**
- **AM Stringaro**
- **M. Bonucci**
